

AngleRx Prescription Optimization Program (POP)

THROUGH FOCUS PRESCRIPTION BENEFITS

How does AngleRx POP help members save on prescriptions?

1. Getting Prescriptions

When a member receives a high-cost prescription or refill, they can just take it to a pharmacy. If the prescription is over \$1,000, it's rejected for review. The pharmacy tech will tell the member to contact AngleRx POP, so we can secure savings.

2. Advocating for Members

We will call or email the member about their prescription. Then, the member will provide the Patient Advocate Prescriber information. Our dedicated Patient Advocate will coordinate with the provider about prior authorization documentation. Then, we'll update the member with the results.

3. Maximizing Savings for Members

All these categories are optional but will be carefully reviewed for potential savings:

Patient Assistance Program (PAP)

Based on the Member's Income

Copay/Coupon Card

Reduced Out-of-Pocket Cost to the Member

International Sourcing

No Out-of-Pocket Cost to the Member

4. Receiving Medication

Once savings have been determined, the member receives their prescription.
